🔥 MouthBurn (MUBN)

A Meme Coin That Burns With Every Word

💥 What is MouthBurn?

MouthBurn is a Solana-based meme token designed to self-burn whenever a specific public figure posts on social media. By default, 🔥 0.1 MUBN is burned per word, with multipliers applied to specific keywords or mentions.

- 🔥 **Token Symbol**: MUBN
- 📦 **Total Supply**: 1 Billion MUBN
- 📉 **Burn Rate**: 0.1 MUBN per word (base)
- 📅 **Vesting Period**: 48 months (1% monthly unlock)

🤡 Why Was It Created?

Every time "he" opened his mouth, my stocks and crypto crashed. So we built a meme coin that gains value whenever he speaks: MouthBurn.

- Fun + Scarcity + Real-Time Deflation
- Tokens disappear as he types → decreasing supply
- No utility, but a strong reason

⚖️ How It Works

1. **Oracle Bot** 🤖
   - Monitors specific SNS accounts regularly
   - Counts word count + applies keyword multipliers
2. **Automated Burn Transactions** 🔥
   - Burns (word count × multiplier × 0.1 MUBN) from burn-only wallet
3. **Keyword Weights** 📏
   - Regular post: 0.1 MUBN per word
   - Global leader names: ×2 burn
   - Keywords like "tariff": ×5 burn
   - Keywords like "war": ×2 burn
   - Mentions of "Biden" or "sleepy joe": 0.1 MUBN airdrop per word

📊 Tokenomics

Category	Share	Amount (MUBN)	Description
Community Airdrop	10%	100M	Immediately distributed at TGE
Operations Pool	25%	250M	Marketing, development, infrastructure, and community ops
Boost Event Pool	7%	70M	For airdrops/burn triggers tied to key events or mentions
Lockup & Vesting Pool	58%	580M	Long-term deflation pool; 1% monthly unlock; split into ops/ecosystem/DAO. Some moved to burn reserve for auto-burning
Total	100%	1B	

🔓 Vesting & Burn Structure

- 1% unlock per month over 48 months post-TGE
- A portion moves to operations/ecosystem DAO; rest to burn reserve
- Burn reserve is triggered by Oracle Bot for automated burns
- Early burns are supported by the boost event pool; long-term burns continue from vesting unlocks

🔥 Deflation Scenario

- Daily SNS-based burn = Word count × Multiplier × 0.1 MUBN
- Initial burns from boost pool → later from vesting pool to burn reserve
- Real-time Oracle + long-term vesting → robust auto-deflation

⚖️ Legal & Risk Disclosure

- Not affiliated with any political party, platform, or figure
- Not a security; no financial advice intended
- Uses only public SNS data; fully automated

🛶 Roadmap

- 🚀 **Launch Phase**
  - TGE and meme campaign kickoff
  - Claim UI launch and operation fund structure setup
- 🔥 **Burn Activation Phase**
  - **Oracle bot operational on testnet**
  - **Live testnet integration with burn and airdrop transactions**
- 🌎 **Expansion Phase**
  - Keyword multiplier events
  - Attempted DEX listing
- 🗄️ **Community Engagement Phase**
  - Meme contests and influencer-based meme coin expansions
  - DAO-driven burn policy governance

🎯 Final Word

MouthBurn is the purest form of meme philosophy: "When he speaks, tokens burn."
 Supply shrinks. Chaos rises. Fun multiplies.
